# Regional Common Denominator for the Innovation Challenge 2024-2025

To facilitate healthcare treatment in, or closer to, the home of the patient.

#### Region North Jutland

Patients suffering from type 2 diabetes, cardiovascular diseases, and dialysis patients

## Develop patient friendly concepts that can help realise potentials for:

- Prevention of hospitalization
- Ensuring relevant hospitalization in good time
- Helping patients to better compliance and make it easier to be self-sufficient
- Reducing climate impact from hospitals.

#### Region Zealand

Patients suffering from cardiovascular diseases and other cronical diseases

Drivers: Reduce resource costs for both hospitals and staff • Care and responsibility awareness in the healthcare system • Digitalization first • More health literacy and responsibility to the patient.

Fellows do a

needs-analysis

#### Root causes:

To map the patients potential for being self sufficient in mastering own

Knowledge sharing between hospital departments.

### Fellow teams' main projects outcome:

Innovative solutions with potential for creating commercial or non-commercial value, and with the possibility for scaling.

#### Local effects:

Collecting and sharing knowledge about local projects.

Fellows' observations of readily accessible improvements for the host departments.
